Thanks for the update. I will await the disk and the revised spread sheet and will forward them to my expert.

Subject: Cayuga Groundwater

Steve, to follow up on my earlier message, apparently the ACSII format is a basic one that should be easily read on your computer. Since it's repetitive technical data (gamma radiation, caliper) you may just want to pass it along to your technical expert anyway. I have requested Dave Eckhardt of USGS to send you a copy of the disk directly. Please note that the earlier data I sent to you is somewhat incomplete since it needs to have some latitude and longitude information inserted. The revised version will be sent to you when it is available.

Finally, you should note that the current list of homeowner wells differs a bit from the list that we sent to you last fall, prior to completion of the field work. In that previous list, we indicated that we wanted to log the well owned by one of your clients (Mindy Thurston & family at 5345 Lockwood Rd, Auburn). In fact, the pump was wedged in that well, so we were unable to conduct the logs. We found a replacement well across the street (Brian Schenk at 5348 Lockwood Road), which we successfully logged in lieu of the Thurston well.

Also note that we added another well that is owned by one of your clients -- Randy Foster at 2250 Overbrook Drive, Auburn. This well was not listed in the previous communication to you. This adjustment was made in the file by USGS and Mr. Foster consented to the well logging as did your other clients.
